

The NEW iM3 Piezo

Ultrasonic Veterinary Dental Scaler

The newly designed P4 Piezo defines the art of modern innovative dental scaling technology with great pride and quality. The unit comes with all of the original Piezo qualities plus the new "AGC" (auto gain control) and LCD digital screen.

The P4 model is equipped with a feature called AGC – Auto Gain Control that allows the user to choose from Scaling, Perio (1-2mm) and Endo mode with the touch of a button. The unit also comes with an LCD digital screen that displays the mode and power setting as well as 4 autoclavable tips and one autoclavable handpiece (Satelec compatible).

- 38,000 Hz (cycles) to remove stubborn plaque and calculus, more power with less enamel damage
- Low heat generation, unlike competitor units which heat up more quickly
- Uses a much smaller volume of water. It does not get as hot so it needs much less cooling water.
- Economically uses water additives such as iM3's CLS Solution
- The handpiece is operated by a foot control.
- Warranted 1 year, sold and serviced by iM3 - the Veterinary Dental Company

Item Code U2000 \$1295.00 + GST & Shipping

Connects directly to the water system of any iM3 veterinary air driven dental system via the Female Quick Connect or stand alone Hand-Pump water tank available from iM3

Brighten your day

and reduce your scaling time by half.

The New iM3® 42-12 Ultrasonic Scaler

A UK Veterinary Dental Expert said this of the 42-12

“the increased speed with which an effective prophylaxis can be carried out, the power (often “cracking off” the calculus with forceps is not required) and the ability to use SAFELY sub-gingivally, make it a worthwhile investment”.

Unlike other ultrasonic tooth scalers that use a ‘jack hammer’ approach to tooth scaling, the 42-12 adopts a more gentle technique with its revolutionary rotational tip movement, and ultrasonic removal of the plaque and calculus (like a water bath instrument or jewellery cleaner).

The 42-12 rapidly removes heavy calculus deposits from all tooth surfaces and is safe to use in periodontal pockets up to 13mm deep. The 42-12 achieves a highly polished finish on the tooth with less enamel damage by using an exceptionally high ultrasonic frequency of 42,000Hz, coupled with an extremely low amplitude of the titanium scaler tip’s circular movement of 0.02mm.

Leading veterinary dentists throughout the World now use the iM3® 42-12

- More power than other units with almost no enamel damage
- Light Weight hand piece with finger on/off and power control right where you need it, eliminating troublesome foot controls altogether
- Doesn’t vibrate or generate excessive heat like other ultrasonic scalers. Try holding your current scaler tip in your fingers, that’s why it can’t scale sub-gingivally
- Autoclavable handpiece and tips
- Ability to safely scale deep sub-gingival pockets
- Unlike other ultrasonics, each 42-12 tip is equally effective on all sides which means real cost savings and faster scaling time, literally half the time
- Easier and quicker to use than hand instruments
- Compact, lightweight and ergonomically designed
